

JOB DESCRIPTION

JOB TITLE:	AWS Data Engineer
LOCATION:	Remote
WORK HOURS:	Nightshift
Summary	<p>We are seeking AWS Data Engineer with a background in AWS Glue, Lambda and Python to join our end client's data engineering team. As an AWS Data Engineer, you will have the opportunity to learn and grow while working on data engineering projects within the AWS ecosystem. Your primary focus will be on supporting the design, development, and maintenance of data lake solutions using AWS Glue and Python.</p>
Responsibilities	<ul style="list-style-type: none">• Assist in designing and implementing ETL processes using AWS Glue to extract, transform, and load data from various sources into data lakes, data warehouses, or other target systems.• Collaborate with senior data engineers to understand data requirements and contribute to the development of efficient and scalable Glue jobs.• Support the optimization and performance tuning of Glue jobs to ensure data accuracy, consistency, and integrity.• Contribute to the development and maintenance of data pipelines and workflows to automate data ingestion, transformation, and data quality checks.• Work closely with the team to identify and resolve data-related issues, ensuring data availability, accessibility, and timeliness.• Assist in monitoring and troubleshooting data pipelines, ensuring the smooth and efficient execution of data processing jobs.• Learn and apply best practices for data governance, data quality, and data security within the AWS environment.• Stay updated with the latest AWS services, tools, and techniques related to data engineering, actively participating in knowledge sharing and learning opportunities.• Enthusiasm for learning new technologies and a proactive attitude towards professional growth.
