

JOB TITLE:	AWS Fullstack (Backend) Developer - NodeJS with Multi-language Expertise
LOCATION:	Remote
Summary	We are seeking a skilled AWS Fullstack (Backend) Developer with expertise in NodeJS and at least one other backend language, such as Java or Python. This role requires a strong command of Git, knowledge of SOAP and REST API integration, API design, security best practices, and robust SQL skills, including database querying, configuration, data extraction, transformation, and normalization.
Responsibilities	<ul style="list-style-type: none">• Contribute to security and identity management aspects of the software• Develop and maintain frontend applications using Node.js and modern JavaScript frameworks such as Angular (v2 and above) or React with a strong emphasis on React. Implement UI components, manage state using Redux, and ensure a visually appealing and responsive user interface with good CSS skills.• Collaborate with cross-functional teams to gather requirements and implement backend functionality, including API integrations using SOAP and REST.• Demonstrate a firm understanding of HTTP methods and basic networking concepts. Possess knowledge of certificates, DNS, and TCP/IP concepts.• Utilize AWS services and technologies such as S3, EC2, CloudFront, Elastic Beanstalk, RDS, DynamoDB, Lambda, load balancing, autoscaling, and serverless architectures. Gain a basic understanding of serverless computing and cloud infrastructure management.• Apply DevOps principles and practices by managing CI/CD pipeline workflows and deployment tooling. Develop automation scripts using Bash or Python for tasks such as generating build artifacts and deploying applications.• Collaborate with team members, participate in code reviews, and contribute to the overall software development lifecycle. Stay updated with industry trends and technologies to propose innovative solutions and enhance the development process.
Qualifications	<ul style="list-style-type: none">• Proficiency in NodeJS and at least one other backend language (Java or Python).• Strong Git skills for efficient version control.• Solid understanding of SOAP and REST API integration, API design, and security best practices.• Proficiency in SQL, including database querying, configuration, data management, extraction, transformation, and normalization.• Some grasp of DevOps and AWS infrastructure, particularly serverless cloud native development.• Experience with app deployment using build pipelines in a CI/CD Agile culture.

Nice-to-Have Skills

- Experience with enterprise automation software for business process workflows, such as Power Apps, Power Automate, Sharepoint, SAP, etc.
- Infrastructure-as-code experience (IaC) with Terraform, Cloud Formation, or boto3.
- Understanding of Linux concepts and command-line interface (CLI) commands.
- Good networking knowledge in areas such as DNS, SSL, SAML, CIDR, subnet masking, and certificates.
